GENERAL DESCRIPTION

ZINCALUME® G300 steel is a continuous hot-dipped aluminium/zinc alloy-coated structural steel with a regular spangle surface and a guaranteed minimum yield strength of 300MPa with good ductility. Suitable for roll-forming to a minimum internal diameter of 1t.

Structural - S

TYPICAL USES

Roofing, walling, general manufactured articles such as rainwater goods, gutters, steel door frames, steel shutters, garage door, signs, appliance panels, air conditioning ducting. For material selection advice, please contact your nearest BlueScope sales office.

IMPORTANT INFORMATION

Spangle variance from coil to coil is an inherent characteristic of metallic alloy coating process and will not affect the performance of the product. It is therefore not a cause for rejection.

Typical mechanical properties are based on typical product despatched to customers. Note that ductility will decline through a natural ageing process during storage and/or paint stoving cycle.

Material should be used promptly (within six months) to avoid the possibility of a storage related corrosion. Roll-forming mark does not affect the performance of ZINCALUME® steel. For selection of the most appropriate metallic coated steel, please refer to technical bulletins TB1a, TB1b, CTB21 and CTB22. For storage, roll-forming lubricants and other information, please refer to the Technical Bulletins.

^{*} Welding design must allow for some strength reduction near welds
